PROFESSIONAL GUIDE FOR ECONOMISTS

How Economists Stay Irreplaceable

When AI Builds Forecasts

Practical guide for economic analysts and strategists

😰 The Problem

AI builds forecasts, analyzes markets, and models scenarios in seconds. What's left for the economist?

🎯 The Answer

Value is no longer in calculations — it's in interpretation, judgment, and strategic decisions.

🚀 The Strategy

Economist + AI = Team. Your goal is to become the strategist who manages AI, not competes with it.

"This guide is not about neural networks. It's about your economics career."

tool map · scenarios for economists · ready-made prompts · transition strategy

PART 1 — Why Economic Experience No Longer Guarantees Competitiveness

For decades, the economist earned a living on the fact that only he could build forecasts, model scenarios, and find patterns in data. Now AI generates macro forecasts, calculates NPV, and builds regressions in 30 seconds. The barrier between "junior" and "senior" analyst has collapsed. The only remaining advantage is economic judgment: the ability to interpret numbers in the context of politics, regulation, and human behavior.

What AI Cannot Do:

🧠 **Interpret economic signals in a political context** — understanding how elections, geopolitics, and regulatory shocks distort market logic

🤝 **Dialogue with regulators and lobby for economic decisions** — persuading, compromising, building coalitions around economic policy

⚡ **Anticipate crises based on informal indicators** — feeling tension in supply chains, capital flight, shifts in trust before they show up in the data

🔍 **Critically evaluate economic models — their assumptions and limitations** — understanding where the model breaks, which data is distorted, and why a forecast could be dangerous

🗺️ Tool Map — What to Use and When

ChatGPT 4o (OpenAI)	Macro analysis, scenarios, text. Universal starting point for economists.
Claude 3.5 (Anthropic)	Long reports, regulatory analysis, strategic documents. Requires VPN.
Perplexity (Perplexity AI)	Search + source analysis. Best for quick fact and data verification.
DeepSeek V3 (DeepSeek)	Reasoning, math, econometrics. Open source, cost-effective.
YandexGPT 4 (Yandex)	Russian market, no VPN. Forecasts for Russia, regional economy.
Kimi k1.5 (Moonshot AI)	Long documents, Chinese research. 2M token window.
Excel / Google Sheets + AI	Quick data analysis, model building, scenario modeling.
Python + Jupyter	Complex econometrics, report automation, custom models.

PART 2 — 8 Scenarios for Economists

01

Macroeconomic Forecast

economist, strategist

PROMPT

> Build a forecast [indicator] for [period]. Factors: [list]. Scenarios: baseline, optimistic, pessimistic.

02

Industry Analysis

economic analyst, consultant

PROMPT

> Analyze industry [name]. Concentration, trends, barriers to entry, risks. SWOT analysis.

03

Pricing

pricing economist, strategist

PROMPT

> Develop a pricing strategy [product]. Competitors, elasticity, segments, dynamic pricing.

04

Investment Analysis

financial analyst, investment economist

PROMPT

> Evaluate investment attractiveness [project/industry]. NPV, IRR, scenarios, risks, recommendations.

05

Crisis Response Plan

risk economist, strategist

PROMPT

> Develop a crisis response plan for [company/sector]. Risks, measures, budget, timelines, owners.

06

Regulatory Analysis

regulatory economist, lawyer-economist

PROMPT

> Analyze the impact of [law/regulation] on [industry]. Cost of compliance, timeline, risks, recommendations.

07

Competitive Intelligence

strategist, economic analyst

PROMPT

> Compile a competitor profile [company]. Finances, strategy, strengths/weaknesses, threats.

08

Strategic Presentation

economist, strategist, chief economist

PROMPT

> Prepare a strategic presentation for the board of directors. Market, position, goals, resources, risks.

PART 3 — Strategy: From "I'm Afraid" to "I'm in Control"

🎯 **Choose One Economic Task** — Pick a specific forecast or analysis you do weekly. Run your first AI experiment this week.

✍️ **Learn to Write Prompts for Economics** — Your professional value is now measured by the quality of instructions you give AI: precise variables, clear constraints, correct scenarios.

🔍 **Critically Evaluate AI Models** — AI builds models with false confidence. Your experience is the filter that catches erroneous assumptions, biased data, and logical gaps.

📈 **Scale What Works** — Expand to 2-3 analysis types, then free up time for strategy, regulator relationships, and informal intelligence.

> *"Don't fear competition with AI. Fear competition with the economist who already knows how to work with it — and sees what the model doesn't."*

🛠️ Starter Tool Set for Economists

Forecasting	ChatGPT + DeepSeek + Excel
Industry Analysis	Perplexity + ChatGPT + YandexGPT
Financial Modeling	ChatGPT + Python + DeepSeek
Regulatory Analysis	Claude + Perplexity + YandexGPT
Competitive Intelligence	Perplexity + Kimi + ChatGPT
Strategic Presentations	ChatGPT + Gamma + Qwen
Crisis Planning	ChatGPT + Claude + Perplexity
